

Prove that each of the following languages is *not* regular.

- 1** $\{\textcolor{blue}{0}^{2^n} \mid n \geq 0\}$.
- 2** $\{\textcolor{blue}{0}^{2n}\textcolor{blue}{1}^n \mid n \geq 0\}$
- 3** $\{\textcolor{blue}{0}^m\textcolor{blue}{1}^n \mid m \neq 2n\}$
- 4** Strings over $\{\textcolor{blue}{0}, \textcolor{blue}{1}\}$ where the number of **0**s is exactly twice the number of **1**s.
- 5** Strings of properly nested parentheses $(\textcolor{blue}{0})$, brackets $(\textcolor{blue}{1})$, and braces $(\textcolor{blue}{2})$. For example, the string $([\textcolor{blue}{1}])\{\textcolor{blue}{2}\}$ is in this language, but the string $([\textcolor{blue}{1}])$ is not, because the left and right delimiters don't match.
- 6** Strings of the form $w_1\#\textcolor{blue}{w}_2\#\cdots\#\textcolor{blue}{w}_n$ for some $n \geq 2$, where each substring w_i is a string in $\{\textcolor{blue}{0}, \textcolor{blue}{1}\}^*$, and some pair of substrings w_i and w_j are equal.

Extra problems

- 7** $\{w \in (\textcolor{blue}{0} + \textcolor{blue}{1})^* \mid w \text{ is the binary representation of a perfect square}\}$
